AIO-6 LTE/Max

Is BMW Quick-Release Module compatible with my BMW?

The **AIO-6 with BMW Quick-Release Module** is designed for motorcycles equipped with **BMW Nav Prep 5/6**. It connects directly to the BMW Nav cradle and is powered by your motorcycle — no extra wiring needed. As long as your bike has Nav Prep 5/6, the AIO-6 can be powered on and used normally.

However, some advanced functions — such as **Wonder Wheel control** or **native data reading** — may be limited on certain BMW models due to software or system differences. These limitations do not affect basic power or display operation.

Please note: The BMW Quick-Release Module is **not included** in the AIO-6 standard package. It must be purchased separately and assembled with the display using simple screws.

Check compatibility with your BMW - Quick Release module
